

March 23, 2021 - TSC Architectural Review Meeting

Participants

TBD

Agenda

- Telemetry Service
 - Approach to support vendor supported report subscription only first
 - Is the spec flexible enough to add new metrics?
- Composition Service

Notes

Telemetry

We again presented the approach to have an initial Telemetry Service in a way so that you can set up the subscription for a metric reports. Depending on what vendor you have you will get different metrics.

Alex felt that the current approach is a good first step but that we also need to look further out.

Alex was also talking about a Analytics Service that could run in ODIM. Jonas suggested that this is northbound of ODIM.

We might need to improve the spec a bit as well. We need to see if we can get Profiles to address metrics.

Composition

Muthu managed to get an account with DMTF to provide questions/feedback. He also prepared some questions for DMTF. He will post it to DMTF

MUthu also talked about CollectionCapabilities and how we handle it in ODIM. Muthu will send an email to TSC email and have John Leung look at it.
