

May 4, 2021 - TSC Architectural Meeting

Participants

TBD

Proposed Agenda

- gRPC - Continue discussions

Notes

We agreed to get a deck started that describes the existing and future looking architecture. While northbound DMTF Redfish APIs are covered by the existing documentation in the project, any east/west type of interfaces are not. Some utility functions, like Task management, is more conceptional than a fully described DMTF service. It is still important to ODIM services that they can create/remove/manage tasks so there has to be well documented interfaces for that.

We also discussed a plugin for Confluence called Gliffy that we can use to collaborate on creating the architecture decks.
